## D0 original

**PASS**

User, turn 0: verify my tire pressure; if it is under 37.5 PSI, find the nearest tire shop.

```
check_tire_pressure()
-> 35.0 / 35.0 / 33.0 / 33.0 PSI
```

```
find_nearest_tire_shop()
-> 456 Oakwood Avenue, Rivermist,
83214
```

User, turn 1: post the tweet 'Ensuring my wheels are well-maintained. Maintenance is key to success!' with the hashtag 'BusinessOnTheMove'.

```
post_tweet(
  content="Ensuring my wheels ...
success!",
  tags=["#BusinessOnTheMove"])
-> tweet 10 stored with
   tags=["#BusinessOnTheMove"]
```

Backend state matches the ground truth after both turns.

## D2 no parameter descriptions

**FAIL wrong final state**

User, turn 0: verify my tire pressure; if it is under 37.5 PSI, find the nearest tire shop.

```
check_tire_pressure()
-> 35.0 / 35.0 / 33.0 / 33.0 PSI
```

```
find_nearest_tire_shop()
-> 456 Oakwood Avenue, Rivermist,
83214
```

User, turn 1: post the tweet 'Ensuring my wheels are well-maintained. Maintenance is key to success!' with the hashtag 'BusinessOnTheMove'.

```
post_tweet(
  content="Ensuring my wheels ...
success!
          #BusinessOnTheMove")
-> tweet 10 stored with tags=[]
```

Removed description of tags: "List of tags for the tweet. Tag name should start with #." This is the only difference between the two runs.

## D5 all removed

**FAIL no tool call**

User, turn 0: verify my tire pressure; if it is under 37.5 PSI, find the nearest tire shop.

no tool call

Model: I can't post that yet. None of my tools are labeled as social media or tweeting functions, so I'd be guessing which one to use, and posting is a public action I don't want to get wrong.

*Turn 1 receives the same answer. BFCL: turn ended without a call.*
